

# Tiemco SP Series

In addition to the outstanding standard hook points, Tiemco introduces innovative speciality point: The new Tiemco SP Series features a hollowed curve point with triangulated edges that sharpen easily. The "slow-tapered" point lowers the resistance of penetration, resulting in accelerated hook sets and better holding ability, especially in barbless versions. Biologically speaking, when a hook pierces a fish's mouth in a flash, the wound will be constricted. The basal part of the point has "apron" on both sides. These tiny swelling will work as barb to some degree. In larger sizes, they also help streamer flies track better in the water by functioning like the keel of a ship. Tiemco SP hooks are available in a saltwater model, a streamer model, and barbless designs for Dries and Nymphs.

## TMC FLY HOOKS

Tiemco's advanced method has revolutionized the design and manufacture of fly hooks. Tiemco has become the world-wide leader by introducing new hook styles that let flies more life-like and by pioneering new manufacturing processes, such as chemical sharpening that improve hook performance. Each year we add new hook designs, extending the range of our hooks to meet the expanding needs of innovative fly tyers. Each Tiemco hook style is designed specifically to satisfy the most demanding customers in the world: the fly tyers who depend on Tiemco hooks. Tiemco fly hooks are made with fly fishing in mind. And since a sharp, strong hook may be the single most important component in your fly fishing gear, we believe it makes perfect sense to choose the best hooks in the world. Think Tiemco!

## TMC SP POINT SERIES

**TMC3769SP-BL** SPS-BL point, 2X Heavy, D/E, Sproat bend, Bronze.

Same design as the TMC3769, except with SP point. An excellent hook for wet/nymph blind fishing where accelerated penetration and superior holding ability are needed. Barbless point doubles penetration ability. Easy to penetrate, hard to come off.

**TMC3761SP-BL** SPS-BL point, 1XL, 2X Heavy, D/E, Sproat bend, Bronze.

Same design as the TMC3761, except with SP point. With its 1X long and SP hook design, this hook should be a standard part of every fly tyer's selection of nymph hooks.

**TMC100SP-BL** SPS-BL point, 0X-1HX, 1.5XW, D/E, Forged, Bronze.

Heavier wire than the TMC100. With its longer Super Point, this barbless model ensures the same holding ability as the barbed TMC100.

**TMC2499SP-BL** SPR-BL point, 2XH, 2XS, 3XW, ST/E, Forged, Bronze.

SP hook with 2X heavy wire for maximum strength. Truly versatile design, perfect for big fish on small nymphs, strong enough for steelhead.

**TMC777SP** SPS point, 2XH, 3.5XL, 2.5XW, ST/E, Forged, Black-nickel.

This SP model is made of very strong carbon steel with a corrosion-resistant black nickel finish. For smaller saltwater patterns, streamers, muddlers, sculpins.

**TMC600SP** SPR point, 3XH, 2XS, 3XW, ST/E, Forged, Black-nickel.

This is the latest style of big game hook features SP. Eyes of each size are considered to be large enough to accommodate shock tippets. Made from high quality carbon steel for superb strength. A corrosion-resistant black nickel finish does not spook the fish.

**TMC100** Dry Fly, D/E, 1XF, Wide gape, Forged, Bronze.

Tiemco's standard dry fly hook. A slightly wider gape and increased wire strength in smaller sizes makes this the most popular all-purpose hook for dry fly work.

**TMC100BL** Dry Fly, D/E, 1XF, Wide gape, Forged, Barbless, Bronze.

A barbless version of Tiemco's most popular dry fly hook. The longer hook point allows for the same secure hooking and holding as the barbed model.

**TMC101** Dry Fly, Straight eye, 1XF, Wide gape, Forged, Bronze.

For anglers who prefer a straight-eye hook, the TMC 101 incorporates all of the other features of the popular TMC 100.

**TMC102Y** Dry Fly, D/E, 1XF, Wide gape, Forged, Black.

Originally designed as a solution for the "quick take" strikes of Japanese native trout, the TMC 102Y has become the standard hook for tying parachute-style patterns. The point has moved back slightly for more secure hooking. Black finish, odd sizes and down-eye only.

**TMC531** Parachute & Thorax, Slightly D/E, 2X Fine, 2X Short, Perfect bend, Microbarb, Black.

The shank of this model is 2X short and the gape is wider than on the same-sized hook of normal shank length. The larger hooking angle is combined with an extremely sharp point to produce a short-shank hook that holds a hooked fish very well.

**TMC9300** Dry & Wet Fly, D/E, 1X Heavy, Wide gape, Forged, Bronze.

The best dry fly hook available for hair-wing patterns. The use of a little heavier wire than the traditional dry fly hook produces a hook that is tough enough to handle large trout in weedy stream or lake conditions. An exceptionally strong dry fly hook that is the perfect choice for standard wets and soft hackle flies.

**TMC5210** Dry Fly, D/E, 1XF, Perfect bend, Forged, Bronze.

This hook features a model "perfect bend" to produce a traditional-style dry fly hook that is both versatile and appealing to the eye of the fly tyer.

<b>TMC5230</b>	Dry Fly, D/E, 3XF, Perfect bend, Forged, Bronze.
<p>A true feather-weight dry fly hook, this is the lightest of the many light-wire hooks available. In size #16, it weighs only 0.13 grains. Not for general dry fly use, but an excellent hook for imitating the most delicate insects on highly selective fish.</p>	
<b>TMC5212</b>	Hopper & Terrestrial, D/E, 2XL, 1XF, Perfect bend, Forged, Bronze.
<p>A 2X-long dry fly hook based on the same design as our TMC 5262 nymph and streamer hook. The long shank makes it useful for imitating hoppers, adult stoneflies and caddis flies, as well as some of the largest mayfly duns.</p>	
<b>TMC921</b>	Dry Fly, D/E, 2X Short, 1X Fine, Forged, Bronze.
<p>A versatile short-shank, dry fly hook that can be incorporated into parachute flies, thorax flies, mayfly emergers and CDC flies. The TMC 921 is also a popular choice for extended-body mayfly patterns.</p>	
<b>TMC500U</b>	Trico & Midge, Up eye, 2X Short, Standard wire, Straight Point, Forged, Bronze.
<p>Although most dry flies are tied on down-eye hooks, many people prefer the up-eye design of the TMC 500U. This is an excellent hook for tricos and midge patterns. The use of standard wire enables this relatively small hook to stand up to the heavy take of a big fish.</p>	
<b>TMC501</b>	Dry Fly, Straight eye, 1X Short, Standard wire, Straight Point, Forged, Bronze.
<p>Our most popular hook for midges and small dry flies. Many manufacturers make their smaller hook sizes, especially sizes #20-#24, in progressively smaller wire sizes. However, as tippet materials continue to improve and achieve higher breaking strengths, Tiemco believes that hook wires must also be made proportionately stronger. On the TMC 501, we use standard wire instead of the traditional 2X-fine or 3X-fine wire. We believe this is the strongest hook made for midge flies in the world.</p>	
<b>TMC508</b>	Midge dry & Tiny emerger, D/E, 3XF, Variable wide gape/short shank, Micro barb, Bronze.
<p>This hook is designed especially for modern midge patterns developed with contemporary synthetic and natural materials in mind. The TMC 508 has a wide gape and long point, to insure more secure hooking and holding. The short shank reduces fly silhouette, and the fine wire makes it much lighter. An ideal hook for tiny dry flies.</p>	
<b>TMC518</b>	Midge dry & Tiny emerger, straight eye, 3XF, Variable wide gape / short shank, Micro barb, Bronze.
<p>This new midge hook was specially designed for the smaller sizes of TMC508. The straight-eye design provides a more open gape needed especially in the micro sizes like these. The size 32 is the world's smallest eyed "decent" fly fishing hook.</p>	

<b>TMC103BL</b>	Dry Fly, D/E, Wide gape, Extra fine wire, Barbless, Black.
<p>With its razor-sharp point and barbless design, this hook penetrates the fish's jaw quickly and holds securely. We find that many people are switching to barbless hooks not only because they simplify releasing fish, but also because the barbless design makes for a more secure hook-up with the fish. The TMC 103BL is a versatile design and can be incorporated into dry flies, soft-hackle patterns, CDC flies and emergers with ease.</p>	
<b>TMC109BL</b>	Dry, Wet, Nymph, Grasshopper, D/E, Wide gape, Extra fine wire, 1X-3X Variable long shank, Barbless, Black.
<p>This is a long-shank version of the barbless TMC 103BL that can be used for both nymphs and dry flies. It features odd-numbered sizes with variable shank lengths. Sizes #7-#9 have a 3X-long shank. Size #11-#15 have a 1.5X-long shank, making them a little shorter in the shank than our TMC 5262. On the smaller sizes, #17-#19, the shank is 1X-long, so you can tie dry flies on this hook just as you would on a TMC 100. Black finish with a very sharp hook point.</p>	
<b>TMC900BL</b>	Dry Fly, D/E, 1XF, 1X Wide, Semidropped Point, Barbless, Forged, Black.
<p>A barbless hook designed so that the point goes outward slightly and the throat is deep enough to hold fish as well as a barbed model. The wire is strong enough to hold big fish. The size range, sizes #8-#24, covers many different types of flies and fishing.</p>	
<b>TMC902BL</b>	No hackle, Sparsely dressed dry fly & emerger, D/E, 2XF, Barbless, Black.
<p>This feather-weight, barbless dry fly hook is best suited for sparsely hackled or no-hackle flies. It is also a good choice for emergers and nymphs. Unlike the TMC 900BL, this lighter-wire model has the point turned slightly inward to compensate for hooking shock that might open the gape. After quick penetration, the modified throat of this hook holds a fish well even without a barb.</p>	
<b>TMC760TC</b>	Wet, D/E, 1X Heavy, 1X Wide gape, TCS point, Limerick bend, Bronze.
<p>This is the long-awaited new wet fly hook features the Limerick bend. The design with the straight TC point insures more secure hooking and holding.</p>	

**TMC106TC** Wet, D/E, 2X Wide, 2X Short, TCR point, Bronze.

A new short-shank wet fly hook with TC point. This could be used for parachute flies, terrestrials and caddis pupae & larvae patterns as well. Truly versatile.

**TMC3769** Wet Fly & Nymph, D/E, 2X Heavy, Sproat bend, Bronze.

The standard down-eye hook for wet flies and nymphs. This model combines a sproat bend with 2X-heavy wire for added strength. A proven choice for many types of sub-surface flies.

**TMC3761** Wet Fly & Nymph, D/E, 1XL, 2X Heavy, Sproat bend, Bronze.

The same basic design as the TMC 3769, but this hook is 1X long for tying more extended nymph patterns and is available in a wider size range, from sizes #2-#20.

**TMC2487** Shrimp & Caddis pupa, D/E, 2X Wide, 2X Short, Fine wire, Bronze.

A curved, fine-wire hook design that is especially effective for shrimp, caddis pupae and other emerger imitations. This model is 2X short and 2X wide in the gape for more secure hooking on large fish.

**TMC2487G** Gold.

Same design as the TMC 2487, except finished in Gold.

**TMC2487BL** Floating nymph, Shrimp, Caddis pupa, D/E, 2X Wide, 2X Short, Fine wire, Barbless, Bronze.

Same design as the TMC2487, except that is barbless. The longer point of this hook allows for the same secure hooking and holding as the popular barbed model.

**TMC2457** Shrimp & Caddis pupa, D/E, 2X Wide, 2X Short, 2X Heavy, Bronze.

Same design as the TMC 2487, except with 2X-heavy wire for added strength. An exceptional hook for glo-bugs and other egg patterns.

**TMC2488** Dry Fly & Nymph, Straight eye, 3X Wide, 2X Short curved shank, Fine wire, Bronze.

A newly designed hook with a curved short shank. The straight-eye design provides a more open gape in the smaller sizes. More than just a straight-eye version of TMC2487, this hook is useful for a wide variety of small patterns.

**TMC200R** Nymph & Dry Fly, Straight eye, 3XL, Standard wire, Semidropped Point, Forged, Bronze.

A straight-eye nymph and dry-fly hook that incorporates a gradually sloped bend to better imitate certain insects. Because this design is 3X-long with a sloping bend, the hook point is semi-dropped for better penetration and holding.

**TMC2312** Hopper & Terrestrial, Straight eye, 2XL, 1XF, Slightly humped shank, Forged, Bronze.

A versatile design for stoneflies, caddis and hopper flies, as well as nymphs. It features a straight eye and slightly curved, 2X-long shank. The Wire is 1X-fine for enhanced floatation of the fly.

**TMC2302** Terrestrial, D/E, 2XL, Standard wire, Slightly humped shank, Forged, Bronze.

Same design as the TMC 2312, except this hook has a down eye and uses standard wire for added strength.

**TMC400T** Swimming nymph, Straight eye, 1XF, Forged, Bronze.

The upswept shank on this model simulates the body posture of a swimming nymph and can be a tremendous advantage in tying precise imitations for selective fish. The design uses a straight eye and 1X-fine wire to help produce a swimming motion in the fly.

**TMC206BL** Caddis pupa & larva, Floating nymph, Emerger, Soft hackle, Parachute, Keel nymph, 2X Short, 1X-3X Variable fine, Curved shank, Barbless, Black.

On this barbless model the shank curves gradually down toward the rear of the hook to balance the slightly up-turned eye, so it rides as a straight-eye hook would in the water. This is an excellent choice for caddis pupa imitations, floating nymphs, emergers, soft hackle flies, parachute dries, CDC dries, shrimp flies and many other patterns.

**TMC947BL** Nymph & Streamer, 2XL-3XL Variable long shank, Standard wire, Forged, Bronze.

The hook shank on this barbless model is curved slightly to help achieve a more natural-looking nymph imitation. The curved shank also helps the fly ride in the correct position in the water instead of turning upside-down. The wide size range, sizes #4-#20, allows you to cover all nymph patterns from the largest stoneflies to smallest mayflies. Since this model uses standard wire, it can also be used for tying dry flies or floating terrestrials.

**TMC205BL** Caddis pupa, Up eye, Standard wire, 5X Wide, Semidropped Point, Barbless, Bronze.

This curved, barbless model hook is designed for caddis pupa, scuds, shrimp and stonefly nymphs. Adding lead wire in the center of the hook or along the whole shank will make you finished nymph drift with the point up and the back down toward the bottom. This technique allows for long, snag-free drifts of the fly. For an upright drift, wind your lead only at the thorax of the fly.

**TMC5262** Nymph & Streamer, D/E, 2XL, 2X Heavy, Perfect bend, Forged, Bronze.

A versatile nymph and streamer hook that uses the TMC perfect bend to produce a classic design. The shank is 2X long and uses 2X-heavy wire for added strength. This hook should be a standard part of every fly tyer's basic selection of hooks.

**TMC5263** Nymph & Streamer, D/E, 3XL, 2X Heavy, Perfect bend, Forged, Bronze.

Same as the TMC 5262, except 3X long for nymph and streamer patterns that require additional length.

**TMC300** Streamer, D/E, 6XL, Heavy wire, Forged, Bronze.

A down-eye streamer hook that is 6X long to fit the requirements of many classic streamer patterns. This model uses heavy wire to stand up to the large fish that are often hooked using this type of fly.

**TMC700** Streamer & Wet Fly, D/E, Heavy wire, Limerick bend, Semidropped point, Forged, Black.

This model is a strong, well-designed hook for streamers and steelhead wet flies. It incorporates the Limerick bend and a semi-dropped point for excellent hooking and holding power on heavy fish. Heavy wire is used to stand up to large, active steelhead, trout and other species.

**TMC765TC** Streamer, D/E, Tapered loop-eye, 0X-3X Heavy, 5.5XL, 1.5X Wide gape, Limerick bend, TCS point, Black nickel.

This ultramodern 5.5 X long streamer hook that features the Limerick bend and straight TC point could go well with classic streamer patterns as well. This is an ideal hook for muddler minnow, sculpin patterns, zonkers and other contemporary streamers.

**TMC7931C** Wet Fly & Streamer, Up-turned tapered loop-eye, 2X Heavy, 2X Long, Wide gape, Black.

A new salmon hook. The shank is tapered so the thickness of the shank would be even. As a matter of fact, flies are going to be more elegant with these hooks. The wider gape to insure more secure hooking and holding.

**TMC7999**

Salmon/Steelhead Wet Fly, Up-turned tapered loop-eye, Heavy wire, Forged, Black.

An up-turned, tapered-loop eye design that has become the standard model for salmon and steelhead wet flies. It uses heavy wire for added strength. Black only.

**TMC7989**

Salmon/Steelhead Dry Fly, Up-turned tapered loop-eye, Light wire, Forged, Black.

Same basic design as the TMC 7999, but this model is used for dry fly patterns and uses light wire for additional floatation of the fly.

**TMC8089**

Bass Bug, Straight eye, Fine wire, Wide gape, Forged, Bronze.

A specialized hook for tying bass bugs. The straight eye and wide gape are helpful for tying deer hair, an essential part of many bass patterns. The fine wire on this model helps keep patterns "floating like a cork." This model also available with a nickel finish. Ask for TMC 8089NP (nickel plate).

**TMC9394**

Streamer, Straight eye, 4XL, 3X Heavy, Nickel plated.

This heavy-wire model is plated with nickel, a corrosion-resistant finish suitable for saltwater, bass and streamer flies. For anglers who prefer a traditional bronze finish, ask for TMC 9395.

**TMC9395**

Bronze.

**TMC800S**

Saltwater Fly, Straight eye, Heavy wire, Semidropped Point, Forged, Stainless.

A stainless steel, saltwater hook designed for use on everything from tarpon to bonefish. Due to the requirements of the manufacturing process, our stainless hooks are not chemically sharpened. However, the points are just as sharp as our other models.

**TMC811S**

Saltwater Fly, Straight eye, Standard Length, Extra Strong, Forged, Stainless.

Designed as a basic stainless hook for saltwater fly fishing. Available in size from #4/0-#8, this model covers a wide variety of saltwater flies and gamefish, with a particular emphasis on bonefish, permit and similar patterns.

<b>TMC911S</b>	Saltwater Fly, Straight eye, 4XL, 3X Strong, Forged, Stainless.
<p>A versatile stainless steel saltwater hook with a very small barb, strong wire and an extra long shank. This hook was designed for saltwater baitfish imitations especially where a long, thin profile is desired.</p>	

<b>TMC411S</b>	Saltwater Fly, Straight eye, Extra Strong, Bend Back, Forged, Stainless.
<p>For many years, saltwater anglers had to bend their stainless hooks to achieve the right look for their flies. Now the TMC 411S design lets them take advantage of an ideal bend-back hook for snag-free saltwater fly fishing.</p>	

<b>TMC511S</b>	Popper and Skipping Bug, Straight eye, 4XL, 2X Wide, Single hump, Forged, Stainless.
<p>This stainless model is a single-humped popper hook designed for saltwater use. In smaller sizes, it can also be used for freshwater fishing. The wide gape makes for more secure hook-ups.</p>	

# TMC Quick Eye Hook

If your fly is tied on the Quick Eye Hook, you no longer have to worry about threading the leader through the eye of your fly in the evening or on a cold day. The eye of this hook is open at one side. So you can slip a monofilament loop into the eye easily. You can also tie a clinch knot as usual and the flanged end prevents the knot from slipping out of the eye.

<b>TMC146Z</b>	Dry Fly, Extra-Fine Wire, Black.
<b>TMC246Z</b>	Emerger/Caddis Pupa, Short Shank, Extra-Fine Wire, Wide Gape, Black.
<b>TMC346Z</b>	Nymph, 2XL, 1X Strong, Black.
<p><b>TMC146Z</b></p>	
<p><b>TMC246Z</b></p>	
<p><b>TMC346Z</b></p>
